

Project Documentation: RapidRaw

Project Type: Mini Project – Prototype Design (Task 4)

1. Project Overview

RapidRaw is a mobile application concept designed to bridge the gap between construction sites and raw material suppliers. The platform allows contractors, builders, and individual home builders to order critical construction materials—such as cement, steel TMT bars, electrical supplies, and plumbing fixtures—and get them delivered directly to their active construction sites "from site to supply in minutes."

The Problem Statement

Sourcing construction materials traditionally involves manual vendor negotiation, price lack of transparency, unpredictable delivery timelines, and fragmented supply chains. This causes expensive project delays.

The Solution

RapidRaw provides an on-demand e-commerce ecosystem for construction. It features transparent pricing, clear material specifications, direct WhatsApp quoting for bulk orders, and integrated checkout flows tailored specifically to heavy industrial cargo.

2. Target Audience & User Personas

- **Independent Contractors & Builders:** Need reliable, quick batch deliveries of materials like cement and steel to keep manual laborers working without downtime.
- **Individual Homeowners:** Need an easy-to-use interface to buy small-to-medium quantities of materials without navigating intimidating wholesale markets.
- **Procurement Managers:** Require clear billing summaries, order tracking records, and structured payment gateways.

3. Core Features & App Flow

The interactive prototype covers a comprehensive user journey consisting of 11 critical frames:

- **Onboarding & Identity (Frames 220–222):** A streamlined splash screen introducing core value propositions (Quality Tools, Fast Delivery, Best Prices) leading to dedicated Login and Account Creation flows.
- **Discovery & Navigation (Frames 223–224):** A homepage organized by categorized industrial sectors (Cement & Steel, Hardware, Paints) alongside targeted brand sections (UltraTech, Anchor, Jaquar).

- **Product Detail Specification (Frames 225, 226, 230):** Custom item pages highlighting weights (50kg vs 25kg), material grades (OPC vs PPC), specific diameters for steel reinforcement bars, and a specialized "**Get Quote on WhatsApp**" feature for custom bulk configurations.
- **Cart & Checkout Pipeline (Frames 227–229):** A price breakdown logic accounting for heavy load deliveries, a standard payment selection system (Cards, UPI, NetBanking, COD), and a historical order ledger to track active processing shipments.

4. UX Design Choices & UI Architecture

Typography & Color Palette

- **Primary Color (Terrakotta/Industrial Amber):** #D57D53 (approximate based on design). Chosen to reflect the physical domain of brick, clay, raw construction, and earth, giving the app an immediate industrial identity.
- **Status & Call to Actions (Safety Green):** Used for WhatsApp interactions and stock availability to instill confidence and signify progress.
- **Typography:** Clean, geometric sans-serif fonts to optimize high scannability when users are viewing product specifications (like weights and pricing) in outdoor, bright construction environments.

Wireframe Architecture to High-Fidelity Transition

During the layout translation, emphasis was placed on high-density information display. Because construction materials are heavily commoditized, the design minimizes decorative elements and maximizes structural clarity: price per unit, weight metrics, and instant checkout CTAs are prioritized in the visual hierarchy.

5. Prototype Interaction Mapping (User Journey)

The shared Figma file contains an explicit interactive prototype layer tracking this linear user journey:

1. **Splash Landing** → Click "Login to your account" → **Login Panel**
2. **Login Panel** → Click "Login" → **Homepage Gateway**
3. **Homepage** → Select "Cement & Steel" → **Product Grid View**
4. **Product Grid** → Choose Item → **Detailed Product Specifications View**
5. **Product View** → Click "Add to Cart" → **My Cart Overview**
6. **My Cart** → Click "Proceed to Payment" → **Address & Payment Selection**
7. **Payment Selection** → Click "Place Order" → **Success Status & Order Ledger**
